Amphibious Trailers

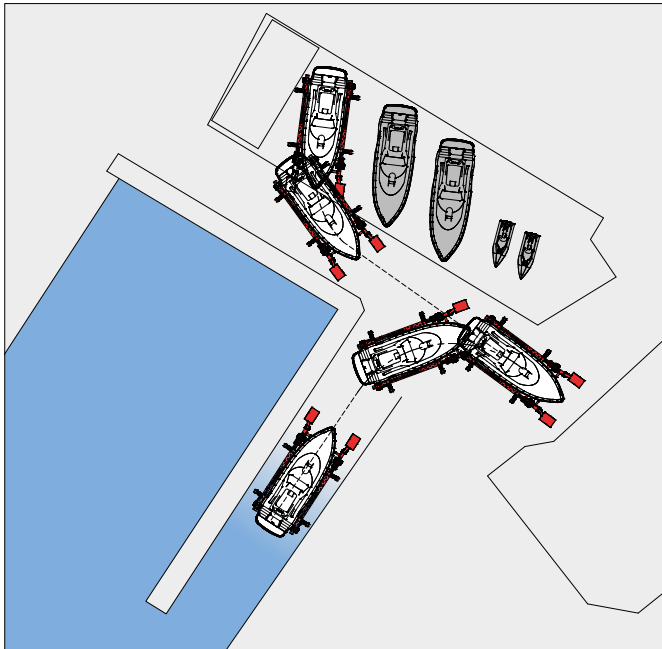

CROC LIFT RANGE

CROC LIFT range offers innovative amphibious and submersible solutions customized to suit ramps, terrain characteristics, vessel types and available space within the yard.

- Handling of motor boats, sailboats, catamarans
- Specific design with raised engine compartment
- Anti-corrosion painting compliant to C5m cycle
- Radio remote control with proportional system
- Self-levelling for maximum load stability
- Lifting by double-effect cylinders on each wheel-group
- Hydraulic supports on each beam to support the hull
- Industrial pneumatic tires

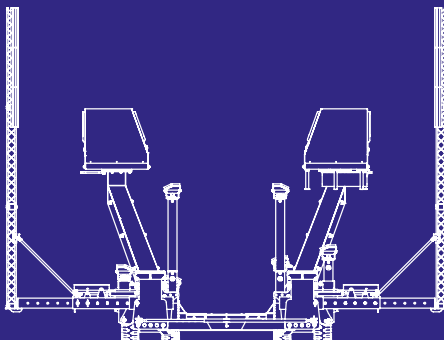

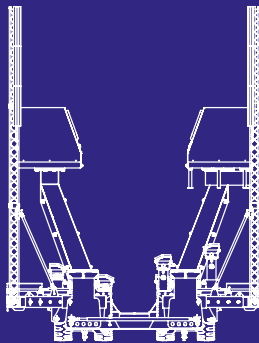

ADVANTAGES OF AMPHIBIOUS TRAILERS

CROC LIFT amphibious trailers feature many advantages in one solution, combining high performances in water and on land.

- In-water boat hauling
- Optimal maneuverability to optimize storage spaces
- Front and rear steering wheels
- Radio-controlled operations

VARIABLE WIDTH

CROC LIFT amphibious trailers can expand and retract with a variable width system.

Amphibious machines can thus be exploited in many contexts and are able to adapt their dimensions according to different types of vessels.

Adjustable centering poles located along the frame enable precise use of the trailer during the underwater phase, assisting operators when approaching the boat and during hauling operations.

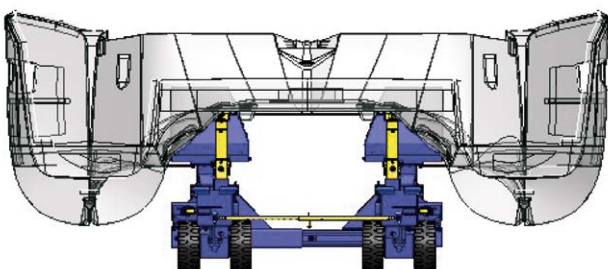

CROC LIFT AND CATAMARANS

VERSATILITY: CROC LIFT submersible trailers are tailored on specific customers' needs and allow the handling of different types of vessels. When it comes to catamarans, CROC LIFT machines provide specific solutions and feature dedicated accessories ensuring care of the vessel, stability and safe movements.

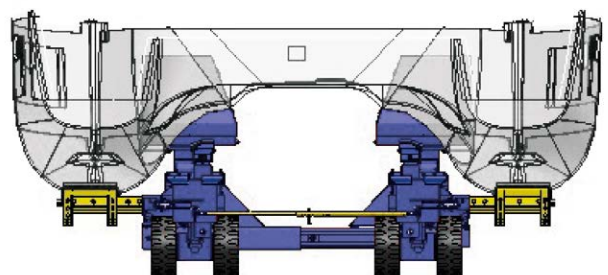

Extended hydraulic arms

Specifically designed supports for increased lifting stroke under the catamaran bridge.

Side external forks

Lateral supports designed to support the two hulls and provide maximum stability during handling operations.

SPECIAL APPLICATIONS

Slings and Poles

CROC LIFT amphibious trailers are available with a sling lifting system: installed on specific poles placed on the beams sides, slings ensure easy lifting operations for different types of hulls.

Tracks

The rubber track configuration allows CROC LIFT amphibious machines to be used even in working areas with no concrete or solid ground. Indeed, the specific tracked solution makes hauling, launching and handling operations possible even on loose sandy terrain.
