Catamarans handling specialists

Catamarans have unique structural features demanding specific handling and lifting solutions. The twin-hulled structure and its greater width compared with monohulls require the use of special equipment designed to ensure an even load distribution and to avoid damage during lifting operations.

BOAT LIFT has developed a range of tailored products that allow safe and effective handling of catamarans: these solutions are fully customized and remotely controlled for maximum safety during operations.

Maneuverability

Customization

Safety

Travel Lift

BOAT LIFT travel lift enables catamarans lifting and handling operations, whether piers or an adequate size hauling and launching basin are available.

Expandable travel lift

The expandable version allows to adapt easily to the size of the catamarans, facilitating movements and increasing manoeuvrability.

PELICAN LIFT Mobile dockside crane

The PELICAN LIFT mobile dockside crane enables hauling and launching operations of catamarans when the use of a standard travel lift is not possible, or in absence of waterfront facilities.

Thanks to the specific design patented by BOAT LIFT, the mobile dockside crane is able to perform operations advancing beyond the dock.

Self-propelled trailer

BOAT LIFT self propelled trailers are compact and versatile handling solutions that simplify on site operations.

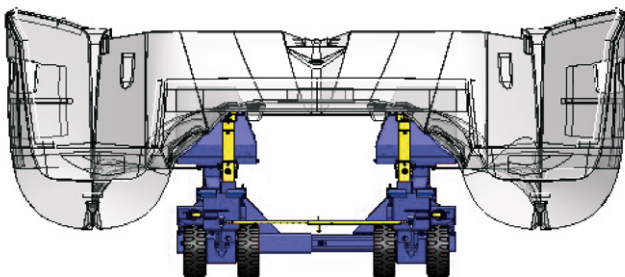

Their special configuration, represents the ideal solution for the transport of multihulls, allowing the optimization of boat storage spaces.

Accessories

BOAT LIFT has developed specific accessories for the correct handling of catamarans, such as extended hydraulic arms and side external brackets for load balancing. Each bracket is equipped with rubber protections, in order to prevent damages and scratches on boat surfaces.

Extended hydraulic arms

Specifically designed mounts for increased lifting stroke under the catamaran bridge.

Side external brackets

Lateral mounts designed to support the two hulls and provide maximum stability during handling operations.

CROC LIFT Amphibious solutions

LIFT**

Discover more

CROC LIFT amphibious trailers and travel lifts are designed for handling catamarans by exploiting ramps and slopes in the working area. The implementation of dedicated accessories makes them a versatile and effective solution.

The range of partially submersible machines combines at best the performances of traditional BOAT LIFT solutions and the possibility to conduct lifting and launching operations of catamarans directly from the water.
